CHEMICALS ON TRIAL

Planting was done on
the 11th of November
2021

Cuperdem being mixed at a rate of 3lt/HA and applied in the planting water.

1 week after planting all the tobacco has taken and there is no sign of dusty surface beetle throughout the tobacco field.

The tobacco has all taken and none has been damaged
by cutworm or dusty surface beetle.

All the chemicals
seem to be doing
their job and there is
no noticeable
difference between
the chemicals yet.

/HA N'DECANOL
/HA PRIME PLUS

The crop received some rain recently. The weeds have started to come through although the weed pressure is worse towards the edge of the land it shows the chemicals have worked.

There is no sign of any disease in the crop this includes frog eye, alterneria and angular leaf spot.

We have sprayed:
Azoxy Duo at 500mls/ha
Twist at 180mls/ha
Bion at 60g/ha
Kasugamycin at 800mls/ha
Cabrio Duo at 1.5lts/ha

Spraying on
Cabrio Duo at
1.5lts/ha.

27/1/2022

Applying our suckerides.

N'decanol and Flumetralin Duo are the suckerides that have been applied.

Flumetralin Duo is made up of 13,5% flumetralin and 30% n'decanol.
